POWERING THE WORLD'S MOST IMPORTANT DEVICES

DCAssure™ - Health Monitoring

DCAssure™ is a health monitoring service that runs on Windows and Linux-based DC hardware. It collects health data of hardware and operating systems, displaying this information in an easy-to-understand graphical web interface. DCAssure™ is typically used to determine the readiness of simulators, ensuring all computers operate within user-set limits before training starts. Its logging feature allows for after-action reviews, reducing the time needed for support teams to restore simulator operational readiness.

Highlights

> Enhanced Operational Efficiency

> Proactive Maintenance

> Easy-to-Use Interface

> Comprehesive Health

Platform:
Windows & Linux

Monitoring:
Real-time health data collection

Interface:
Graphical web interface

Use Case:
Simulator readiness assessment

Logging:
Detailed after-action review logs
